

# **Unique Opportunity for Swim Team Volunteers**

## **Provided by Be Smartt Meet Management**

Be Smartt Inc. is this one of this country's as well as NJ's foremost professional meet management corporations and they have decades of experience running meets and training others. The founder of Be Smartt Inc, Ellen Mace has agreed to run a Colorado Timing System and HY-Tek Meet Management training here at the Montclair YMCA.

The training will take place on Friday evening 10/13 /06 and they will help us run the 10/U session of the Red Black meet in Saturday 10/14/06.

This is a great opportunity for any volunteers who are interested in learning more about running the timing console and the meet management software. We have a relatively simple tool to time the swimmers with, and when we run multi-team meets it is by far the easiest way to do it. Anyone with computer background - whether in software or hardware - or even comfort and proficiency in Microsoft Office - can easily learn to help the team in this capacity.

What is The Colorado System? This is the timing console which connects the starting system, the touch pads, the scoreboard and the backup buttons. This system produces some of the most accurate meet results available for swim meets today. One of the features of this system is that it can easily connect to a computer to allow for transfer of data for meet management.

What is Hy Tek Sports Management Software? The Hy Tek system is essential to running a swim team smoothly. We use three programs made by this company but for meet purposes, we use "Meet Manager" which is easy to use and is designed for simple interface with the timing console.
